

ASE - Progress Report Sprint 1

1 Keywords

technology stack, architecture, environment setup, endpoints, database connection, user model, common ground, user modification, searching, retrieving, deleting

2 Overall Progress Score: 4

3 Completed Activities

- Getting to know the proposed technology stack & tools and how they work
- Understanding the architecture and how the individual components & frameworks interact with each other
- Setting up the development environment according to the architecture plan
- Creating a list of endpoints to ensure communication between frontend and backend (https://docs.google.com/spreadsheets/d/1AEexZ33N0f3nKfhgLcljyV2BV64BfK9zoEfgQ4G_oJA/edit?usp=sharing)
- Initially connecting to the database for authentication and user management
- Creating a user model that both the authentication and user management can use to be on a common ground
- Implementing user management: modification/update of the profile, searching for users, retrieving user data, deleting user

3 Current Activities

- Modifying user (password with maettuu and searching a solution for profile picture), to be closed ASAP

3 Goals

- Expansion of the endpoints
- Creation of endpoints for cross-communication between microservices
- Following and unfollowing users
- Reviews and feed of reviews

3 Issues

- None
